CA 2 – Assignment, EE6221, 2026.10

Study the state of the art of one type of robots or autonomous systems, e.g.,

- Humanoid robots
- Mobile manipulators
- Robot manipulators
- Robot grippers (robot hands)
- Autonomous cars
- Manufacturing robots
- Logistics robots
- Healthcare robots
- …

Specific tasks for the assignment:

I. Review and compare the existing research and development works, demos, products and projects, and find out the best solution(s) from your point of view, for your selected type of robot. You can consider the overall solution or focus on one specific technology for that type of robot (Need to include at least 2 articles published in the recent 12 months in the list of references)

II. Describe, in your words,
    1) the best solution(s) and explain in detail why you select them to be the best
    2) the challenges to improve this type of robots
    3) the future possible directions to further improve this type of robots
    4) what you learned from this review
    5) whether this assignment increases: your understanding in robotics and intelligent systems, your interest to pursue a future career in robotics and intelligent systems.

(100 marks)

Submission through NTULearn:

1. It is an individual assignment.
2. Each student shall submit softcopy of work in PDF through NTULearn by 7 November 2026, Saturday.
3. Copying directly from others' work and articles (including online articles in a different language) are strictly not allowed.
