Assignment 2

Please submit your Assignment 1 and Assignment 2 (compile into one pdf file) to submission portal of EE6407 assignments 1&2 under the folder of Assignments by 19 Oct 2026.

Question:

Given a 2-class pattern classification problem, where the training data is given in data_train, and the class label is given in the label_train. The test data is given in data_test (23 samples).

(1) Train a Fisher linear discriminant classifier: give the values of weight vector $\mathbf{w}$ and bias term w_0, and the decision rule

(2) Use the trained classifier in part (1) to predict the class label of the test data: give the class labels of all the testing samples .
